UDP Meta - Physical Table .....	122

Data Dictionary	
Name	Comment
UA_AttributeDef	<p>The UA_AttributeDef table contains the definitions of both system and custom attributes for offers and cells (campaign custom attributes are still stored in the UA_CampAttribute table). System-defined attributes have the field SystemDefined=1. Currently Offers (OfferTemplates, Offers, OfferHistory) and Cells use these attribute definitions.</p> <p>This table is written to when the Save button is invoked from the Custom attribute definition page. Each attribute creates one row in this table, identified by the unique ID AttributeID. After an attribute is initially created, some fields like the AttributeType and Length fields cannot be modified (see individual fields for further info).</p>
UA_Calendar	<p>This table holds calendar information identifying information about calendar quarters, days of the week, first and last days of the week, etc. It is used to facilitate reporting over time.</p> <p>It is expected that this table will be customized by customers during implementation. It is the responsibility of the implementation to ensure that dates referenced in Contact history are contained in the time span covered by this table.</p>
UA_Campaign	<p>This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign.</p>
UA_CampAttribute	<p>This table stores the values of the campaign custom attributes for each campaign.</p>
UA_CampToCellAttr	<p>This table is a mapping of cell custom attributes to Campaign. The AttributeIDs in that table are all of cell attributes. This table is populated only in campaigns created in Unica Marketing Operations.</p>
UA_CampToOffer	<p>This table stores top-down defined relationships between a campaign and its related offers (specified by the user from the Campaign summary page by clicking on "Add/Remove Offers" link). This can be a many-to-many mapping.</p> <p><b>**Bottom-up offers (offers used in a flowchart of the campaign) are not stored in this table.</b></p>
UA_CampToSegment	<p>This table stores top-down defined relationships between a campaign and its related segments (specified by the user from the Campaign summary page by clicking on "Add/Remove Segments" link). This can be a many-to-many mapping.</p> <p><b>**Bottom-up segments (strategic segments used in a flowchart of the campaign) are not stored in this table.</b></p>
UA_CCRunLog	<p>This table logs each time a flowchart is run in production (not populated by test runs), providing a flowchart run history. A unique RunID is generated on each new flowchart run (but not for run branch/process). It records the start/end datetime and who ran the flowchart. For Campaign Collaborate runs, it also</p>

Data Dictionary	
Name	Comment
	records information about the remote user.
UA_CellAttribute	<p>This table stores the custom cell attribute values for a particular cell. These values are data-entered by the user in the Target Cell Spreadsheet (TCS). Only one of the fields (StringValue, NumberValue, DatetimeValue) is populated for any given row, depending on the data type of the custom attribute (as specified in UA_AttributeDef).</p> <p>Attributes are displayed in the Target Cell spreadsheet in alphabetical order.</p>
UA_ContactHistory	<p>User-created table that stores the required contact fields (AudienceID, CellID, PackageID, ContactDateTime, ContactStatusID, and so forth) plus any user-defined additionally tracked fields. There is a separate table for each audience level.</p> <p>Rows in this table are written if the CSP logging table has "Log to contact history tables" enabled. This table captures cell membership information and identifies cells treated in the same CSP by packageID (all contacts made to the same audience entity in the same CSP is part of the same "package", which represents an interruption). Both target cells and hold-out controls are written to contact history (CH).</p> <p>Existing entries in this table can be updated (ContactStatus, UpdateDateTime, and user-defined fields) using the Track process. The Track process cannot create new rows in this table.</p> <p>This table is required for tracking contacts. This is also used by ACO for applying Optimization to contacts.</p> <p>This "base" contact history table is populated simultaneously with the UA_Treatment, UA_OfferHistory, and UA_OfferHistAttrib tables (together all of these tables make up "contact history"). None of these tables are written if log to contact history is not enabled in a CSP.</p>
UA_ContactStatus	<p>This table contains the valid contact statuses (defined at implementation time) that can be used to log to contact history. There must be one row designated as the default contact status (IsDefault = 1).</p> <p><b>**There is no GUI for creating, viewing, or updating contact statuses. These must be maintained directly in the system table.</b></p>
UA_CustomMacros	<p>This table stores custom macros for reuse across users and flowcharts. It stores the query name, query (which can be raw SQL or the Affinium macro language) and description. The custom macro can take input parameters and return a data value with each audience ID.</p>

Data Dictionary	
Name	Comment
UA_DerivedField	This table stores derived fields for reuse across users and flowcharts. It stores the name, definition, and description. New derived fields created within the campaign are stored in this table by using the Create Derived Field window. Long predicate expressions may span multiple rows using the Description field as a numeric index to stitch together the multiple rows.
UA_DtlContactHist	This table stores exactly which audience IDs received which offer versions in the offer personalization (sub-cell) case where not all individuals in the same cell receive exactly the same offers. They may receive a different # of offers and/or different offer versions. This table has rows written to it only when UA_Treatment.HasDetailHistory = 1.
UA_EnumAttrValues	This table holds all the drop-down list (enumerated) data values for custom attributes where UA_AttributeDef.EnumType = 1 or 2.
UA_Flowchart	This table stores information for all flowcharts. It has one row for each flowchart in the system and is also used for reporting on the running flowcharts (status) in the system.
UA_FlowchartSeg	This table contains all of the relationships between segments and flowcharts. It will define when a segment is created by a flowchart and/or when a segment is simply reference by the flowchart. By having this table we can ensure that FK relationships are enforced at the DB level.
UA_FlowchartTpl	This table stores meta data for flowchart templates. It is populated when a user chooses Tools->Stored Templates from the flowchart menu.
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).
UA_IDSByType	This table contains the next valid ID for various object types (for the Primary key to be used for a new row to be inserted in each of the Table in the Campaign system). These are used by the system to generate globally unique IDs in the system and prevent the need for uniqueness checking. This table maintains a counter for each type of the object (table). Every time a new row is created, the current value of the counter is used for the primary key, and the counter is incremented.
UA_Initiatives	Holds names of marketing initiatives (populates Initiative field in the Campaign Summary page).

Data Dictionary	
Name	Comment
UA_Offer	<p>This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer.</p> <p>During offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.</p>
UA_OfferAttribute	This table stores the values of the static attributes and default values of the parameterized attributes associated with an offer (system-generated and custom).
UA_OfferHistAttrib	This table stores the actual values used for parameterized (only) offer attributes when an offer is used (given out in a flowchart production run with logging to CH enabled). It is populated at flowchart run time.
UA_OfferHistory	This table stores all offer versions that have been given out to customers. It determines if a particular combination of parameterized offer attributes (offer version identified by OfferHistoryID) for a given offer (offerID) has already been created (using the CRC value). The UA_OfferHistory table is populated only once for each unique offer version. If the UA_OfferHistory table is already populated for an offer, it will not be populated again if contact history is updated for the same offer.
UA_OfferList	This table stores both internal and user-created offer lists. User-created offer lists can be static (fixed list of offers) or smart (dynamic; based on a query). Internally generated offer lists are used to group together the actual list of offers assigned to a specific cell in a CSP when multiple offers are assigned. Internal offer lists may reference user-created offer lists (only one level of nesting supported).
UA_OfferListMember	<p>This table stores the members of an offer list. For a user-defined static offer list, this contains the list of OfferIDs and their display order and is populated when the offer list is saved. For a user-defined smart offer list, this table contains the list of folders to which the smart query has been scoped (if any). For an internal offer list, this table stores any referenced (nested) offer lists.</p> <p>The members can be any of these:</p> <ul style="list-style-type: none"> <li>o an individual offer</li> <li>o an offerList</li> <li>o a folder</li> </ul> <p>Each offer list member must be exactly one of the above.</p>

Data Dictionary	
Name	Comment
UA_OfferListRes	This table stores the offerIDs that a dynamic offer list resolves to at run-time.
UA_OfferTemplate	This table contains one row for each offer template defined in the system (these are used to create offers). For each offer template, it defines the number of offer codes, their formats, and the offer code generator; the treatment code format and generator; and general offer template meta data.
UA_OfferTemplAttr	This table stores the offer attribute values associated with a particular offer template and specifies whether each attribute is hidden, parameterized, its default value, and display order. Note that only one of the fields StringValue, NumberValue and DatetimeValue contain the value for the attribute based on the attributeType defined in the UA_AttributeDef table.
UA_OfferToProduct	This table stores the information about the relationship between offers and products, specified by the "Relevant offers" field (required for an offer). It is only populated if the user specifies a value for the Relevant Offers field of an offer.
UA_Personalization	Stores the personalization settings on the homepage. Personalization items includes recently viewed items for campaigns and sessions.
UA_Product	This table is provided by the customer and must minimally contain a ProductID field uniquely identifying each product. Any other fields are optional, but in practice are required to provide fields for the user to query against to define the set of qualifying products related to an offer. This field is expected to be populated and commonly used for inferred responses (e.g., for hold-out control groups).
UA_ProductIndex	<p>This table stores the many-to-many relationship between products and offers based on the ProductIDs that match the "product query" associated with an offer (from the Related Offers field). It is used to quickly resolve the set of products associated with a particular offer for response tracking without having to re-run the UA_OfferToProduct.Condition query.</p> <p>This table is periodically populated/updated by a java program, interval configured in Unica Manager Platform (list parameters).</p>
UA_ResponseHistory	User-created table that stores the required response tracking fields (AudienceID, TreatmentInstID, response date, response type, and so forth) plus any user-defined additionally tracked fields. There is a separate response history table for each audience level. Rows in this table are written by the Response process.
UA_SegMembership	This table contains the members of each strategic segment (can be a many-to-many relationship). There is one SegMembership table per audience level. It is only populated if the system table is mapped. It is required to be mapped for ACO to function. It is updated to contain the latest members each time the CreateSeg process that creates it is run in production.
UA_Segment	This table stores information on the strategic segments created by the Create Seg process. It is populated when a CreateSeg process is created and saved in a flowchart and subsequently updated when the CreateSeg process is run. A temporary copy of the row is created (with TempFlag=1) when the flowchart

Data Dictionary	
Name	Comment
	containing the CreateSeg process box is being edited or run.
UA_SegmentType	An enum table that is pre-populated at the time of system table creation. This table helps identify the set of valid values of Segment Type.
UA_SegRefType	A lookup table that is prepoluated with the valid references types.
UA_SesnRunType	This enumerates the Campaign session run types (excluding test mode)
UA_Session	Stores information on sessions created in Campaign.
UA_SummaryCube	Stores information on all cubes created with the Cube process and provides status information and a pointer to the CubeDataFile name stored on the Campaign server.
UA_TableCatalog	This table stores information on all table catalogs available in Affinium Campaign.
UA_TargetCells	This table stores information on target cells created in all flowcharts. Target cells are defined as cells that are attached to an output process (Mail List, Call List, Recommend, eMessage, Snapshot, or Optimize). It stores meta data information (name, code), source info (campaign, flowchart and cell IDs), treatment data (list of assigned offers/offer lists and whether it is a control cell), and whether the cell was created top-down in the Target Cell Spreadsheet (TCS) or bottom-up from within a flowchart.
UA_Time	This table holds time information identifying information about the hours and minutes for a particular time. It is used to faciliate reporting. This table must be populated as part of the implementation setup.
UA_TmpTablePool	System table created when installing 7.5.3/8.1.0 or upgrading to 7.5.3/8.1.0. This table is used by Temp Table Pool Manager module of the Campaign Server for storing table IDs and their schemas. Configuration: UseTempTablePool setting in campaign partitions partition1 datasources data_source controls the usage of this table.
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_Triggerlist	This table stores a name, a definition, and a note for each outbound trigger sent through the Schedule and Contact processes. A trigger executes a command line, which can be a batch file or a script file.

Data Dictionary	
Name	Comment
UA_UsrResponseType	User-defined table at implementation time that stores the list of response types with their descriptions. Once configured, the contents of this table will be displayed in the configuration of a Response process.
UA_Version	

Column(s) of "UA_AttributeDef" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Delete	Configurable
AttributeID	bigint	NOT NULL	Globally unique identifier of the attribute. This ID is assigned by the system when an attribute is created.  Custom attribute IDs start at either 100 or the value of internalIDLowerLimit config parameter, whichever is higher.	Yes	No	Yes	Yes	No	No		Yes	No	No	No
Name	varchar(64)	NOT NULL	Internal name of the attribute, must be globally unique. The name is user-provided for custom attributes and is the name used in any Affinium query expression when the field is used as an AGF. The internal name is automatically provided for system-defined attributes and cannot be modified.  **Changing this value after it has been used will break any query expressions referencing the prior name."	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special Affinium query language name characters	Yes	Yes	No	No
DisplayName	varchar(64)	NULL	Name of attribute, should be unique with offer attributes or unique within cell attribute names. The name is user-provided for custom attributes and is	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No

Column(s) of "UA_AttributeDef" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Overrides	User-Entered	Valid Values	Stored-Create	Stored-Update	Stored-Delete	Configurable
			the label displayed to the user in forms and reports (e.g., the Custom attributes definition page).											
Description	varchar(512)	NULL	Optional, user-entered, free-form description of the attribute.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
ObjectType	int	NULL	System-generated value specifying the type of object for which this attribute is defined.	No	No	Yes	Yes	No	No	1=Session, 2=Campaign, 3=Segment, 4=Offer, 5=Product, 6=Cube, 7=ACOSession, 8=CustomMacro, 9=DerivedField, 10=Trigger, 11=TargetCell	Yes	No	No	No
EnumType	int	NULL	User specified behavior on whether an attribute is a free-form text box (user enters value), a drop-down list with fixed entries, or whether the user can choose from a drop-down list OR add an additional value. Additional values are checked for uniqueness (case-insensitive compare) and will be available in the drop-down list for all users.  Type can be only be changed from 1 to 2 and vice versa after initial creation.  *This option is currently available only for enumerated text strings (not for date, numeric, or currency data types).	No	No	Yes	No	No	Yes	0=Edit Only, 1=Enumeration Only, 2=Enum with Dynamic Add	Yes	Yes	No	No
AttributeType	int	NULL	User-specified data type for a custom attribute (not editable for a system-defined attribute). Types 5 and 6 can only be created from UMO or	No	No	Yes	No	No	Yes	1=String, 2=Number, 3=DateTime, 4=Currency, 5=Boolean,	Yes	No	No	No

Name	Comment
UA_OfferTemplAttr	This table stores the offer attribute values associated with a particular offer template and specifies whether each attribute is hidden, parameterized, its default value, and display order. Note that only one of the fields StringValue, NumberValue and DatetimeValue contain the value for the attribute based on the attributeType defined in the UA_AttributeDef table.
UA_CellAttribute	This table stores the custom cell attribute values for a particular cell. These values are data-entered by the user in the Target Cell Spreadsheet (TCS). Only one of the fields (StringValue, NumberValue, DatetimeValue) is populated for any given row, depending on the data type of the custom attribute (as specified in UA_AttributeDef).  Attributes are displayed in the Target Cell spreadsheet in alphabetical order.
UA_OfferHistAttrb	This table stores the actual values used for parameterized (only) offer attributes when an offer is used (given out in a flowchart production run with logging to CH enabled). It is populated at flowchart run time.
UA_EnumAttrValues	This table holds all the drop-down list (enumerated) data values for custom attributes where UA_AttributeDef.EnumType = 1 or 2.
UA_OfferAttribute	This table stores the values of the static attributes and default values of the parameterized attributes associated with an offer (system-generated and custom).
UACO_POA0000000000	This is an example table, built per ACO session, based on the UACO_POABase table.
UA_CampToCellAttr	This table is a mapping of cell custom attributes to Campaign. The AttributeIDs in that table are all of cell attributes. This table is populated only in

Child Relationship(s) of "UA_Calendar" Table	
Child Table	
Name	Comment
UA_ResponseHistory	User-created table that stores the required response tracking fields (AudienceID, TreatmentInstID, response date, response type, and so forth) plus any user-defined additionally tracked fields. There is a separate response history table for each audience level. Rows in this table are written by the Response process.
UA_ContactHistory	<p>User-created table that stores the required contact fields (AudienceID, CellID, PackageID, ContactDateTime, ContactStatusID, and so forth) plus any user-defined additionally tracked fields. There is a separate table for each audience level.</p> <p>Rows in this table are written if the CSP logging table has "Log to contact history tables" enabled. This table captures cell membership information and identifies cells treated in the same CSP by packageID (all contacts made to the same audience entity in the same CSP is part of the same "package", which represents an interruption). Both target cells and hold-out controls are written to contact history (CH).</p> <p>Existing entries in this table can be updated (ContactStatus, UpdateDateTime, and user-defined fields) using the Track process. The Track process cannot create new rows in this table.</p> <p>This table is required for tracking contacts. This is also used by ACO for applying Optimization to contacts.</p>

Child Relationship(s) of "UA_Calendar" Table	
Child Table	
Name	Comment
	This "base" contact history table is populated simultaneously with the UA_Treatment, UA_OfferHistory, and UA_OfferHistAttrib tables (together all of these tables make up "contact history"). None of these tables are written if log to contact history is not enabled in a CSP.
UA_DtlContactHist	This table stores exactly which audience IDs received which offer versions in the offer personalization (sub-cell) case where not all individuals in the same cell receive exactly the same offers. They may receive a different # of offers and/or different offer versions. This table has rows written to it only when UA_Treatment.HasDetailHistory = 1.

#### Parent Relationship(s) of "UA\_Calendar" Table

Column(s) of "UA_Campaign" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Quasi-Primary	User-Enforced	Valid Values	Stored-Create	Stored-Create Cause	Stored-Exclude	Configurable
CampaignID	bigint	NOT NULL	Globally unique, system-generated identifier of a campaign, assigned by the system when a campaign is created. AC uses the next available value (assumed unique) from the UA_IDSByType table for campaigns.	Yes	No	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values (may be outside this range for campaigns imported from another system using sesutil)	Yes	No	No	No
Name	varchar(64)	NOT NULL	Name of campaign; not required to be unique (but is a best practice to be unique).	No	No	Yes	Yes	Yes	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No

Column(s) of "UA_Campaign" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Update	Stored-Delete	Configurable
Description	varchar(1024)	NULL	Optional, user-entered, free-form description of the campaign.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
FolderID	bigint	NULL	Folder ID for the folder where the campaign is stored. Value is automatically populated based on the folder where the object is stored. User can change this value by "moving" the object to a different folder.	No	Yes	Yes	Yes	No	No	Any valid FolderID value existing in UA_Folder table	Yes	Yes	No	No
CampaignCode	varchar(32)	NOT NULL	Globally unique code for the campaign. By default a campaign code is generated by the system using the configured campaign code generator (campCodeGenProgFile) when creating a new campaign. The length and format of the campaign code is specified at implementation time (campCodeFormat). (Both of these configuration parameters can be found in the server > systemCodes config section). The campaign code can be changed by the user to any unique value satisfying the code format (enforced by Campaign).  **Changing this value after a campaign is run may cause response tracking problems if campaign code is used.	No	No	Yes	Yes	Yes	Yes	Depends on campaign code format specified: n = 0-9 a = A-Z c = A-Z, 0-9 x = any character	Yes	Yes	No	No
Initiative	varchar(255)	NULL	Optional initiative associated with this campaign.	No	No	No	No	No	Yes	Any value from the UA_Initiatives table  **If values are subsequently	Yes	Yes	No	No

Column(s) of "UA_Campaign" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Execute	Configurable
										deleted from UA_Initiativies, it is possible to have values here that do not appear in that table.				
Objectives	varchar(1024)	NULL	Optional, free-form text description of the campaign objective(s).	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
CreateDate	datetime	NULL	Date and time the Campaign is created.	No	No	Yes	Yes	No	No	Valid datetime	Yes	No	No	Yes
CreateBy	int	NULL	UMP userId of the user who created the Campaign.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	No	No	No
UpdateDate	datetime	NULL	Last server date and time the object was updated (edited and saved).	No	No	Yes	Yes	No	No	Valid datetime	Yes	Yes	No	Yes
UpdateBy	int	NULL	UMP user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	Yes	No	No
StartDate	datetime	NULL	Date the campaign is effective. In the UI, this is the campaign Effective Date. Default value is today.	No	No	Yes	Yes	Yes	Yes	Valid datetime	Yes	Yes	No	Yes
EndDate	datetime	NULL	Date the campaign expires. In the UI, this is the campaign Expiration Date. Default value is one month from start date.	No	No	Yes	Yes	Yes	Yes	Valid datetime	Yes	Yes	No	Yes
LastRunDate	datetime	NULL	Date and time the campaign was last run (any flowchart, branch, process run of any flowchart within the campaign). This value is NULL if never run. Test runs do NOT update this value.	No	No	No	Yes	No	No	Valid datetime	No	No	Yes	Yes

Column(s) of "UA_Campaign" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Update	Stored-Delete	Configurable
RunBy	int	NULL	UMP user ID for the user who last ran the campaign; updated whenever LastRunDate is updated. This value is NULL if never run. Test runs do NOT update this value.	No	No	No	Yes	No	No	Valid UserID in UMP  **Value may be invalid if UMP user is subsequently deleted.	No	No	Yes	No
ProjectID	int	NULL	Affinium Plan project ID. This field is populated when a campaign is created from Plan. By default, this value is NULL. When a project in plan is disassociated with this campaign, the system writes a NULL to this field (based on UnlinkProjectNotification campaign service call).	No	No	No	Yes	No	No	NULL, 0, or valid ProjectID from Affinium Plan	Yes	Yes	No	No
PolicyID	int	NULL	Security policy ID for the object, which determines which UMP users are allowed to access this object. The security policy for the object is automatically set to the security policy of the folder in which the object resides if the object is created in a folder (cannot be changed by the user). The user can change the security policy of the object by moving the object to a different folder with a different security policy (user requires "move" permissions for that object in both the source and destination security policies).  It is directly settable by the user only when the object is created in the top-level root folder for that object type (security policies in which the user has a role are displayed as choices).	No	No	Yes	Yes	Yes	Yes	Id in IBM Unica Platform's USM_ROLE table	Yes	Yes	No	No

Child Relationship(s) of "UA_Campaign" Table	
Child Table	
Name	Comment
UA_Flowchart	This table stores information for all flowcharts. It has one row for each flowchart in the system and is also used for reporting on the running flowcharts (status) in the system.
UA_CampToSegment	This table stores top-down defined relationships between a campaign and its related segments (specified by the user from the Campaign summary page by clicking on "Add/Remove Segments" link). This can be a many-to-many mapping.  **Bottom-up segments (strategic segments used in a flowchart of the campaign) are not stored in this table.
UA_CampToOffer	This table stores top-down defined relationships between a campaign and its related offers (specified by the user from the Campaign summary page by clicking on "Add/Remove Offers" link). This can be a many-to-many mapping.  **Bottom-up offers (offers used in a flowchart of the campaign) are not stored in this table.
UA_TargetCells	This table stores information on target cells created in all flowcharts. Target cells are defined as cells that are attached to an output process (Mail List, Call List, Recommend, eMessage, Snapshot, or Optimize). It stores meta data information (name, code), source info (campaign, flowchart and cell IDs), treatment data (list of assigned offers/offer lists and whether it is a control cell), and whether the cell was created top-down in the Target Cell Spreadsheet (TCS) or bottom-up from within a flowchart.

Child Relationship(s) of "UA_Campaign" Table	
Child Table	
Name	Comment
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_OptimizeProcess	An entry in this table represents a single optimize process box as seen in Campaign flowcharts.
UA_CampToCellAttr	This table is a mapping of cell custom attributes to Campaign. The AttributeIDs in that table are all of cell attributes. This table is populated only in campaigns created in Unica Marketing Operations.
UA_CampAttribute	This table stores the values of the campaign custom attributes for each campaign.

Parent Relationship(s) of "UA_Campaign" Table	
Parent Table	
Name	Comment
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).

Column(s) of "UA_CampAttribute" Table

#### Child Relationship(s) of "UA\_CellAttribute" Table

Parent Relationship(s) of "UA_CellAttribute" Table	
Parent Table	
Name	Comment
UA_AttributeDef	<p>The UA_AttributeDef table contains the definitions of both system and custom attributes for offers and cells (campaign custom attributes are still stored in the UA_CampAttribute table). System-defined attributes have the field SystemDefined=1. Currently Offers (OfferTemplates, Offers, OfferHistory) and Cells use these attribute definitions.</p> <p>This table is written to when the Save button is invoked from the Custom attribute definition page. Each attribute creates one row in this table, identified by the unique ID AttributeID. After an attribute is initially created, some fields like the AttributeType and Length fields cannot be modified (see individual fields for further info).</p>
UA_TargetCells	This table stores information on target cells created in all flowcharts. Target cells are defined as cells that are attached to an output process (Mail List, Call List, Recommend, eMessage, Snapshot, or Optimize). It stores meta data information (name, code), source info (campaign, flowchart and cell IDs), treatment data (list of

			contact status for controls.										

Child Relationship(s) of "UA_ContactStatus" Table	
Child Table	
Name	Comment
UA_ContactHistory	<p>User-created table that stores the required contact fields (AudienceID, CellID, PackageID, ContactDateTime, ContactStatusID, and so forth) plus any user-defined additionally tracked fields. There is a separate table for each audience level.</p> <p>Rows in this table are written if the CSP logging table has "Log to contact history tables" enabled. This table captures cell membership information and identifies cells treated in the same CSP by packageID (all contacts made to the same audience entity in the same CSP is part of the same "package", which represents an interruption). Both target cells and hold-out controls are written to contact history (CH).</p> <p>Existing entries in this table can be updated (ContactStatus, UpdateDateTime, and user-defined fields) using the Track process. The Track process cannot create new rows in this table.</p> <p>This table is required for tracking contacts. This is also used by ACO for applying Optimization to contacts.</p> <p>This "base" contact history table is populated simultaneously with the UA_Treatment, UA_OfferHistory, and UA_OfferHistAttrib tables (together all of these tables make up "contact history"). None of these tables are written if log to contact history is not enabled in a CSP.</p>
UA_DtlContactHist	<p>This table stores exactly which audience IDs received which offer versions in the offer personalization (sub-cell) case where not all individuals in the same cell receive exactly the same offers. They may receive a different # of offers and/or different offer versions. This table has rows written to it only when UA_Treatment.HasDetailHistory = 1.</p>

#### Parent Relationship(s) of "UA\_ContactStatus" Table

Column(s) of "UA_CustomMacros" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Defined	Valid Values	Stored-Create	Stored-Data	Stored-Index	Configurable
FolderID	bigint	NOT NULL	Folder ID for the folder where the custom macro is stored. Value is automatically populated based on the folder where the object is stored. User can change this value by "moving" the object to a different folder.	No	Yes	Yes	Yes	No	No	Any valid FolderID value existing in UA_Folder table	Yes	Yes	No	No
Name	varchar(255)	NOT NULL	Name of the macro; must be globally unique. If the custom macro requires input parameters, they must be comma-separated and listed inside parentheses. E.g., "MySumGroupBy(id, table, field)"	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special name characters for Affinium expression names	Yes	Yes	No	No
Description	varchar(1024)	NULL	Optional description of custom macro in the first row of a specific derived field; contains an index number (2-n) only when the predicateexpr exceeds the field length and is stored across multiple rows.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text OR number 2 through N	Yes	Yes	No	No
Expression	varchar(2000)	NULL	Text representing the macro expression. Variable names must be enclosed in angle brackets. E.g., "Select <id>, sum(<field>) from table <table> group by <id>"	No	No	Yes	No	No	Yes	Any valid SQL or Affinium language expression	Yes	Yes	No	No
ExpressionType	int	NULL	Type of expression (specified by the user when creating the custom macro). The expression can be an Affinium language expression that returns a list of audience IDs to be match-merged, a raw SQL expression returning an ID list, a raw SQL expression that returns paired IDs and a value (text or numeric), or a raw SQL fragment (just pasted in as text substitution).	No	No	Yes	Yes	No	No	0=Affinium, 1=SQL List, 2=SQL Value	Yes	Yes	No	No

Column(s) of "UA_CustomMacros" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Update	Stored-Delete	Configurable
DataSrcName	varchar(255)	NULL	Name of datasource. This field is not populated if you are using an "Affinium" expression type. Configured data source names are displayed to the user for selection.	No	No	No	No	No	Yes	Valid data source name, configured in dbconfig.lis	Yes	Yes	No	No
DataVarType	int	NULL	Whether a returned data value in a raw SQL expression is a numeric or string data type. Required if ExpressionType = 2.	No	No	No	No	No	Yes	7=Numeric, 8=Text	Yes	Yes	No	No
DataVarNBytes	int	NULL	The length of the returned data value in bytes. Required if ExpressionType = 2.	No	No	No	No	No	Yes	Positive integer	Yes	Yes	No	No
CreateDate	datetime	NULL	Date and time when the custom macro is created.	No	No	Yes	Yes	No	No	Valid datetime	Yes	No	No	Yes
CreateBy	int	NULL	UMP UserId of the user who created the macro.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	No	No	No
UpdateDate	datetime	NULL	Last server date and time the object was updated (edited and saved); same as CreateDate for initial object creation.	No	No	Yes	Yes	No	No	Valid datetime	Yes	Yes	No	Yes
UpdateBy	int	NULL	UMP user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	Yes	No	No
PolicyID	int	NULL	Security policy ID for the object, which determines which UMP users are allowed to access this object. The security policy for the object is automatically set to the security policy of the folder in which the object resides if the object is created in a folder (cannot be changed by the user). The user can change the security policy of the object by moving the object to a different folder with a different security policy (user requires "move" permissions for that object in both the source and destination security policies).  It is directly settable by the user only when the object is	No	No	Yes	Yes	Yes	Yes	Id in IBM Unica Platform's USM_ROLE table	Yes	Yes	No	No

Child Relationship(s) of "UA_Folder" Table	
Child Table	
Name	Comment
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign.
UA_Segment	This table stores information on the strategic segments created by the Create Seg process. It is populated when a CreateSeg process is created and saved in a flowchart and subsequently updated when the CreateSeg process is run. A temporary copy of the row is created (with TempFlag=1) when the flowchart containing the CreateSeg process box is being edited or run.
UA_Offer	This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer.

Child Relationship(s) of "UA_Folder" Table	
Child Table	
Name	Comment
	During offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.
UA_OfferList	This table stores both internal and user-created offer lists. User-created offer lists can be static (fixed list of offers) or smart (dynamic; based on a query). Internally generated offer lists are used to group together the actual list of offers assigned to a specific cell in a CSP when multiple offers are assigned. Internal offer lists may reference user-created offer lists (only one level of nesting supported).
UA_Session	Stores information on sessions created in Campaign.
UA_Triggerlist	This table stores a name, a definition, and a note for each outbound trigger sent through the Schedule and Contact processes. A trigger executes a command line, which can be a batch file or a script file.
UA_DerivedField	This table stores derived fields for reuse across users and flowcharts. It stores the name, definition, and description. New derived fields created within the campaign are stored in this table by using the Create Derived Field window. Long predicate expressions may span multiple rows using the Description field as a numeric index to stitch together the multiple rows.
UA_CustomMacros	This table stores custom macros for reuse across users and flowcharts. It stores the query name, query (which can be raw SQL or the Affinium macro language) and description. The custom macro can take input parameters and return a data value with each audience ID.
UA_TableCatalog	This table stores information on all table catalogs available in Affinium Campaign.
UA_FlowchartTpl	This table stores meta data for flowchart templates. It is populated when a user chooses Tools->Stored Templates from the flowchart menu.
UACO_OptSession	An entry in this table represents a single ACO session with all of its meta-data.

creatorObjectId	bigint	NULL	ID of an offer object in the creator application. If Campaign is integrated with UMO, the value indicates the ID of the corresponding offer in UMO.	No	No	No	No	No	No	Positive Long	No	Yes	No	No

Child Relationship(s) of "UA_Offer" Table	
Child Table	
Name	Comment
UA_OfferAttribute	This table stores the values of the static attributes and default values of the parameterized attributes associated with an offer (system-generated and custom).
UA_CampToOffer	<p>This table stores top-down defined relationships between a campaign and its related offers (specified by the user from the Campaign summary page by clicking on "Add/Remove Offers" link). This can be a many-to-many mapping.</p> <p><b>**Bottom-up offers (offers used in a flowchart of the campaign) are not stored in this table.</b></p>
UA_OfferListMember	<p>This table stores the members of an offer list. For a user-defined static offer list, this contains the list of OfferIDs and their display order and is populated when the offer list is saved. For a user-defined smart offer list, this table contains the list of folders to which the smart query has been scoped (if any). For an internal offer list, this table stores any referenced (nested) offer lists.</p> <p>The members can be any of these:</p> <ul style="list-style-type: none"> <li>o an individual offer</li> <li>o an offerList</li> <li>o a folder</li> </ul> <p>Each offer list member must be exactly one of the above.</p>

Child Relationship(s) of "UA_Offer" Table	
Child Table	
Name	Comment
UA_ProductIndex	<p>This table stores the many-to-many relationship between products and offers based on the ProductIDs that match the "product query" associated with an offer (from the Related Offers field). It is used to quickly resolve the set of products associated with a particular offer for response tracking without having to re-run the UA_OfferToProduct.Condition query.</p> <p>This table is periodically populated/updated by a java program, interval configured in Unica Manager Platform (list parameters).</p>
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_OfferToProduct	This table stores the information about the relationship between offers and products, specified by the "Relevant offers" field (required for an offer). It is only populated if the user specifies a value for the Relevant Offers field of an offer.
UA_OfferHistory	This table stores all offer versions that have been given out to customers. It determines if a particular combination of parameterized offer attributes (offer version identified by OfferHistoryID) for a given offer (offerID) has already been created (using the CRC value). The UA_OfferHistory table is populated only once for each unique offer version. If the UA_OfferHistory table is already populated for an offer, it will not be populated again if contact history is updated for the same offer.
UACO_ROffer	This table contains the set of offers that constraint the given rule for the given subsection.
UACO_PCT0000000000	This is an example table, built per ACO session, based on the UACO_PCTBase table.
UACO_SesnOffer	This table contributes to the definition of two items: the score matrix and the "displayed offers" used in the session.

Parent Relationship(s) of "UA_Offer" Table	
Parent Table	
Name	Comment
UA_OfferTemplate	This table contains one row for each offer template defined in the system (these are used to create offers). For each offer template, it defines the number of offer codes, their formats, and the offer code generator; the treatment code format and generator; and general offer template meta data.
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).

Name	Comment
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_OfferHistAttrib	This table stores the actual values used for parameterized (only) offer attributes when an offer is used (given out in a flowchart production run with logging to CH enabled). It is populated at flowchart run time.

Child Table	
Name	Comment
UA_OfferTemplAttr	This table stores the offer attribute values associated with a particular offer template and specifies whether each attribute is hidden, parameterized, its default value, and display order. Note that only one of the fields StringValue, NumberValue and DatetimeValue contain the value for the attribute based on the attributeType defined in the UA_AttributeDef table.
UA_Offer	<p>This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer.</p> <p>During offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.</p>

Parent Relationship(s) of "UA_OfferTemplAttr" Table	
Parent Table	
Name	Comment
UA_AttributeDef	<p>The UA_AttributeDef table contains the definitions of both system and custom attributes for offers and cells (campaign custom attributes are still stored in the UA_CampAttribute table). System-defined attributes have the field SystemDefined=1. Currently Offers (OfferTemplates, Offers, OfferHistory) and Cells use these attribute definitions.</p> <p>This table is written to when the Save button is invoked from the Custom attribute definition page. Each attribute creates one row in this table, identified by the unique ID AttributeID. After an attribute is initially created, some fields like the AttributeType and Length fields cannot be modified (see individual fields for further info).</p>
UA_OfferTemplate	This table contains one row for each offer template defined in the system (these are used to create offers). For each offer template, it defines the number of offer codes, their formats, and the offer code generator; the treatment code format and generator; and general offer template meta data.

DateID	bigint	NULL	Date ID representing the date information from the UA_Date table	No	Yes	Yes	Yes	No	No	Valid DateID from UA_Date table	No	No	Yes	Yes
TimeID	bigint	NULL	Time ID information from the UA_Time table	No	Yes	Yes	Yes	No	No	Valid TimeID from the Time table	No	No	Yes	No
UserDefinedFields	char(18)	NULL	This is a placeholder for one or more user-defined columns in this table. You can replace the values in this field with one or more custom fields that you want to track in this table. These fields can be populated when you run a Response or Track process. You can use the "More Options" button on the Response process logging tab to have contact history records logged with specific treatment IDs, package IDs, contact statuses, and so on.	No	No	No	No	No	Yes	Any value accepted by the DB based on data type	No	No	Yes	No

#### Child Relationship(s) of "UA\_ResponseHistory" Table

Parent Relationship(s) of "UA_ResponseHistory" Table	
Parent Table	
Name	Comment
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_UsrResponseType	User-defined table at implementation time that stores the list of response types with their descriptions. Once configured, the contents of this table will be displayed in the configuration of a Response process.
UA_Calendar	This table holds calendar information identifying information about calendar quarters, days of the week, first and last days of the week, etc. It is used to facilitate reporting over time.  It is expected that this table will be customized by customers during implementation. It is the responsibility of the implementation to ensure that dates referenced in Contact history are contained in the time span covered by this table.
UA_Time	This table holds time information identifying information about the hours and minutes for a particular time. It is used to facilitate reporting. This table must be populated as part of the implementation setup.

			segment) or smart segment (dynamic evaluation based on membership criteria)											

Child Relationship(s) of "UA_Segment" Table	
Child Table	
Name	Comment
UA_FlowchartSeg	This table contains all of the relationships between segments and flowcharts. It will define when a segment is created by a flowchart and/or when a segment is simply reference by the flowchart. By having this table we can ensure that FK relationships are enforced at the DB level.

Parent Relationship(s) of "UA_Segment" Table	
Parent Table	
Name	Comment
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).
UA_SegmentType	An enum table that is pre-populated at the time of system table creation. This table helps identify the set of valid values of Segment Type.

Column(s) of "UA_SegmentType" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen	User-Entered	Valid Values	Stored-Create	Stored-Delete	Stored-Update	Configurable
SegmentType	int	NOT NULL	This is the ID for the Segment Type. There are currently two segment types, interactive and batch	Yes	No	Yes	Yes	No	No	1 - Batch, 2 - Interactive	Yes	No	No	No
Description	varchar(64)	NULL	The description of the Segment Type.	No	No	No	Yes	No	No	Any string	Yes	No	No	No

Child Relationship(s) of "UA_SegmentType" Table	
Child Table	
Name	Comment
UA_Segment	This table stores information on the strategic segments created by the Create Seg process. It is populated when a CreateSeg process is created and saved in a flowchart and subsequently updated when the CreateSeg process is run. A temporary copy of the row is created (with TempFlag=1) when the flowchart containing the CreateSeg process box is being edited or run.

#### Parent Relationship(s) of "UA\_SegmentType" Table

Column(s) of "UA_SegRefType" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen	User-	Valid Values	Stored-Create	Stored-	Stored-	Configurati
RefType	int	NOT NULL	The ID of the reference type. RefType ties the UA_FlowchartSeg table to the UA_SegRefType table. Batch flowcharts always have the value 1. Unless you have IBM Interact incorporated in your environment, the value will never be 2 for batch flowcharts. A value of 2 is used only for Interactive flowcharts.	Yes	No	Yes	Yes	No	No	1= creator, 2 = referencer	Yes	No	No	No
Description	varchar(64)	NULL	A description of the reference type.	No	No	No	Yes	No	No	Any string	Yes	No	No	No

Child Relationship(s) of "UA_SegRefType" Table	
Child Table	
Name	Comment
UA_FlowchartSeg	This table contains all of the relationships between segments and flowcharts. It will define when a segment is created by a flowchart and/or when a segment is simply reference by the flowchart. By having this table we can ensure that FK relationships are enforced at the DB level.

#### Parent Relationship(s) of "UA\_SegRefType" Table

Column(s) of "UA_SesnRunType" Table
-------------------------------------

Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Clone	Stored-Exclude	Configurati
RunType	int	NOT NULL	Unique ID for a Campaign session run type	Yes	No	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values (may be outside this range for campaigns imported from another system using sesutil).	Yes	No	No	No
Description	varchar(64)	NULL	Session run type description (not visible in UI)	No	No	Yes	No	No	Yes	Valid string	Yes	Yes	No	No

**Child Relationship(s) of "UA\_SesnRunType" Table****Child Table**

Name	Comment
UA_CCRunLog	This table logs each time a flowchart is run in production (not populated by test runs), providing a flowchart run history. A unique RunID is generated on each new flowchart run (but not for run branch/process). It records the start/end datetime and who ran the flowchart. For Campaign Collaborate runs, it also records information about the remote user.

**Parent Relationship(s) of "UA\_SesnRunType" Table****Column(s) of "UA\_Session" Table**

Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Clone	Stored-Exclude	Configurati
SessionID	bigint	NOT NULL	Unique identifier of the session. This ID is assigned by the system when a session is created. 			from the TCS).											
CellCode	varchar(64)	NULL	String value identifying the cell; must meet the system configuration cell code format (CellCodeFormat under server>system codes). Cell code must be unique in the flowchart only if the configuration parameter AllowDuplicateCellCodes=0 (detection occurs through flowchart validation tool and at run time).	No	No	Yes	Yes	Yes	Yes	Any string satisfying the cell code format specified by the server>system codes>CellCodeFormat config parameter	Yes	Yes	No	Yes
ControlCellID	bigint	NULL	If a control cell is assigned to a target cell, this field contains the control cell ID (which must be a cell identified as a control and must be a cell in the same flowchart and connected to the same CSP when created bottom-up; can be any cell in the TCS when created top-down).	No	No	No	Yes	No	Yes	Any valid CellID in the UA_TargetCell table	Yes	Yes	No	No
IsControl	int	NULL	Specifies whether a target cell is a hold-out control cell or not. If a cell is designated as a control, no offers may be assigned to that cell (and previously assigned offers are cleared).	No	No	No	Yes	Yes	Yes	0=target cell; 1=hold-out control cell	Yes	Yes	No	No
CampaignID	bigint	NULL	Identifies the campaign ID to which this target cell is associated with	No	Yes	Yes	Yes	No	No	Any valid CampaignID in the UA_Campaign table	Yes	No	No	No
FlowchartID	bigint	NULL	Identifies the flowchart ID to which this target cell is associated with	No	No	Yes	Yes	No	No	Any valid FlowchartID from the UA_Flowchart table	Yes	Yes	No	No
OfferListID	bigint	NULL	Identifies the internal offer list created to include all the offers and offer lists assigned	No	Yes	No	Yes	No	Yes	Any valid OfferListID in UA_OfferList where OfferListType =	Yes	Yes	No	No

Column(s) of "UA_TargetCells" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Edit	Stored-Delete	Configurable
			to the target cell by the user (either in a CSP or in the TCS). This value is NULL if no offers are assigned.							3				
DisplayOrder	int	NULL	Identifies the order in which target cells should be displayed in the TCS. User may use the row up/down icons to re-order the display when editing the TCS.  Bottom-up created row initially have NULL values (which display at the top of the TCS), but these can be manually re-ordered by the user and receive a non-NULL display order value.	No	No	No	Yes	Yes	Yes	Positive integers starting with one, incrementing by one for each row created in the TCS; NULL is valid for rows created bottom-up from flowcharts	Yes	Yes	No	No
CreateDate	datetime	NULL	Server date and time the object was created.	No	No	Yes	Yes	No	No	Valid datetime	Yes	No	No	Yes
CreateBy	int	NULL	UMP UserID of the user who created the Cell	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	No	No	No
UpdateDate	datetime	NULL	Last server date and time the object was updated (edited and saved); same as CreateDate for initial object creation.	No	No	Yes	Yes	No	No	Valid datetime	Yes	Yes	No	Yes
UpdateBy	int	NULL	UMP user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	Yes	No	No
IsTopDown	int	NULL	Any target cell created in the TCS is a top-down created cell (as opposed to cells that created within a flowchart). A target cell may be both top-down defined and linked to a cell in the flowchart.	No	No	Yes	Yes	No	No	0=bottom-up; 1=top-down	Yes	Yes	No	No

Column(s) of "UA_TargetCells" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Delete	Stored-Update	Configurable
IsReadOnly	int	NULL	Specifies that a target cell is read only and the user cannot specify a control cell or assign offers from the TCS. This occurs when a target cell is connected to multiple output processes in a flowchart or if offer/control cell control should be disabled (e.g., for target cells connected to Snapshot or Optimize process boxes).	No	No	Yes	Yes	No	No	0=read/write; 1=read-only	Yes	Yes	No	No
Retired	int	NULL	Specifies whether this target cell is associated with a specific CSP process in a flowchart. This value will be "retired" if the CSP that created it no longer exists or no longer is treating this cell.	No	No	Yes	Yes	No	No	1 = Retired; 0 = Active	Yes	Yes	No	No
Approved	int	NULL	Specifies whether this row of the Target Cell Spreadsheet (TCS) has been approved (approvals can only occur in UMO's TCS)	No	No	Yes	No	No	Yes	0 = Not approved  1/NULL = Approved (always 1 when UMO is not integrated)	Yes	Yes	No	No
CellCount	int	NULL	Contains the number of unique audience IDs in the cell (updated when user manually clicks "Get Cell Status" in the TCS)	No	No	No	Yes	No	No	Any non-negative integer	No	Yes	No	No
LastRunType	int	NULL	Specifies the type of the last run generating the cell count	No	No	No	Yes	No	No	Production Flowchart  Production Branch  Production Process  Test Flowchart  Test Branch	No	Yes	No	No

LastRunTime	datetime	NULL	Last server date and time the cell count was updated	No	No	No	Yes	No	No	Valid datetime	No	Yes	No	No

Child Relationship(s) of "UA_TargetCells" Table	
Child Table	
Name	Comment
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_CellAttribute	This table stores the custom cell attribute values for a particular cell. These values are data-entered by the user in the Target Cell Spreadsheet (TCS). Only one of the fields (StringValue, NumberValue, DatetimeValue) is populated for any given row, depending on the data type of the custom attribute (as specified in UA_AttributeDef).  Attributes are displayed in the Target Cell spreadsheet in alphabetical order.

Parent Relationship(s) of "UA_TargetCells" Table	
Parent Table	
Name	Comment
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign.

Parent Relationship(s) of "UA_TargetCells" Table	
Parent Table	
Name	Comment
UA_OfferList	This table stores both internal and user-created offer lists. User-created offer lists can be static (fixed list of offers) or smart (dynamic; based on a query). Internally generated offer lists are used to group together the actual list of offers assigned to a specific cell in a CSP when multiple offers are assigned. Internal offer lists may reference user-created offer lists (only one level of nesting supported).

Column(s) of "UA_Time" Table													
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System	Sys-Gen	User-	Valid Values	Stored-As Text	Stored-As Number	Configurable
TimeID	bigint	NOT NULL	Unique identifier for a row of this table.	Yes	No	Yes	No	No	No	Time represented as HHMMSS (currently SS is always 00)	No	No	Yes
Hour	int	NULL	The hour of the specified time.	No	No	Yes	No	No	No	Positive integer between 0-23	No	No	Yes
Minute	int	NULL	The minute of the specified time.	No	No	Yes	No	No	No	Positive integer between 0-59	No	No	Yes

Child Relationship(s) of "UA_Time" Table	
Child Table	
Name	Comment
UA_ResponseHistory	User-created table that stores the required response tracking fields (AudienceID, TreatmentInstID, response date, response type, and so forth) plus any user-defined additionally tracked fields. There is a separate response history table for each audience level. Rows in this table are written by the Response process.
UA_ContactHistory	<p>User-created table that stores the required contact fields (AudienceID, CellID, PackageID, ContactDateTime, ContactStatusID, and so forth) plus any user-defined additionally tracked fields. There is a separate table for each audience level.</p> <p>Rows in this table are written if the CSP logging table has "Log to contact history tables" enabled. This table captures cell membership information and identifies cells treated in the same CSP by packageID (all contacts made to the same audience entity in the same CSP is part of the same "package", which represents an interruption). Both target cells and hold-out controls are written to contact history (CH).</p> <p>Existing entries in this table can be updated (ContactStatus, UpdateDateTime, and user-defined fields) using the Track process. The Track process cannot</p>

Child Relationship(s) of "UA_Time" Table	
Child Table	
Name	Comment
	<p>create new rows in this table.</p> <p>This table is required for tracking contacts. This is also used by ACO for applying Optimization to contacts.</p> <p>This "base" contact history table is populated simultaneously with the UA_Treatment, UA_OfferHistory, and UA_OfferHistAttrib tables (together all of these tables make up "contact history"). None of these tables are written if log to contact history is not enabled in a CSP.</p>
UA_DtlContactHist	This table stores exactly which audience IDs received which offer versions in the offer personalization (sub-cell) case where not all individuals in the same cell receive exactly the same offers. They may receive a different # of offers and/or different offer versions. This table has rows written to it only when UA_Treatment.HasDetailHistory = 1.

			run (same value as UA_ContactHistory.PackageID). It allows identification of all the offers given to the same audience ID in the same package/interruption.  PackageID and CellID are used together to join CH and Treatment table for reporting.							internalIDUpperLimit configuration parameter values for generated values (may be outside this range for campaigns imported from another system using sesutil)				
RunID	bigint	NULL	In a batch flowchart, the run ID represents a separate/new run of the flowchart (value is incremented on a run of the flowchart, but not on a run branch/process). In an interactive flowchart, RunID is incremented only when the flowchart is changed and saved.	No	Yes	Yes	Yes	No	No	Any valid RunID from the UA_CCRunLog table	No	No	Yes	No
RunDateTime	datetime	NULL	Date & time the CSP creating the treatments was last run (any flowchart, branch, process run of any flowchart within the campaign). This value is updated on a run branch/process.	No	No	Yes	Yes	No	No	Valid datetime	No	No	Yes	Yes
TreatmentCode	varchar(64)	NULL	Globally unique, system-generated code based on the treatment code format in UA_OfferTemplate.TreatmentCodeFmt used to generate the OfferID (not overridable by the user).	No	No	Yes	Yes	No	No	Unique treatment code meeting the required format in UA_OfferTemplate.TreatmentCodeFmt	No	No	Yes	No
CntrlTreatmtFlag	int	NULL	Identifies whether the treatment	No	No	Yes	No	No	Yes	0=treatment created for target cell;	No	No	Yes	No

Column(s) of "UA_Treatment" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen	User-Entered	Valid Values	Stored-Create	Stored-Delete	Stored-Execute	Configurable
			instance is for a hold-out control cell or not. Control treatments are written to CH, but not to contact/output lists. Used for response tracking for inferred responses.							1=treatment created for control cell				
CntrlTreatmtInstID	bigint	NULL	If CntrlTreatmtFlag=1, this field is NULL. If CntrlTreatmtFlag=0 and the user assigned a control cell to the target cell, this field contains the treatment instance ID of the control treatment.	No	No	No	Yes	No	No	Any valid TreatmentInstID from the UA_Treatment table where CntrlTreatmtFlag=1	No	No	Yes	No
TreatmentSize	int	NULL	Number of unique members (audience IDs) being treated by this treatment. This is the number of members in CellID in the non-personalization case (where everyone in the cell gets exactly the same treatments), but it is a number <= cell size when offer personalization is used (when HasDetailHistory=1).	No	No	Yes	Yes	No	No	Non-negative integer	No	No	Yes	No
OfferID	bigint	NULL	The offer ID of the offer associated with this treatment.	No	Yes	Yes	No	No	Yes	Any valid OfferID from UA_Offer	No	No	Yes	No
ProcessID	bigint	NOT NULL	Unique ID of the CSP that created this treatment (this value is unique within the flowchart, but not globally unique; need flowchartID for global uniqueness). This value is used to support "Clear History" functionality in	No	No	Yes	Yes	No	No	Valid integer (process ID does not need to exist in the flowchart as the process box may have been deleted).	No	No	Yes	No

Column(s) of "UA_Treatment" Table														
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen	User-Entered	Valid Values	Stored-Create	Stored-Delete	Stored-Execute	Configurable
			the CSP (clear history for a specified run for all treatments created by that process box).											
HasDetailHistory	int	NULL	Identifies if offer personalization is being used where not all members of the cell receive exactly the same offers. This occurs when a derived field or data field based on individual attributes is used for offer parameterization, or results are being processed from optimized ACO results, or when the CSP is in an interactive flowchart.	No	No	Yes	Yes	No	No	0=no detailed history; 1=has records in UA_DtlContactHist table	No	No	Yes	No
ExpirationDateTime	datetime	NULL	Actual last date (through midnight) that the offer version is valid. This value may be based on the process box run time + duration (UA_Offer.ExpirationDateFlag=1) or may be an absolute value specified by the offer (UA_Offer.ExpirationDateFlag=0) or user (if parameterized).	No	No	Yes	No	No	Yes	Valid datetime on or after EffectiveDateTime	No	No	Yes	Yes
EffectiveDateTime	datetime	NULL	Actual first date (starting at midnight) that the offer version is valid. This value may be based on the process box run time (UA_Offer.EffectiveDateFlag=1) or may be an absolute value specified by the offer	No	No	Yes	No	No	Yes	Valid datetime	No	No	Yes	Yes

Column(s) of "UA_Treatment" Table

			(UA_Offer.EffectiveDateFlag=0) or user (if parameterized).											
OfferHistoryID	bigint	NULL	Link to the specific offer version associated with this treatment if the offer has any parameterized offer attributes.	No	Yes	Yes	Yes	No	No	Valid OfferHistoryID from UA_OfferHistory table	No	No	Yes	No
CampaignID	bigint	NULL	Identifies the campaign ID to which this treatment is associated with	No	Yes	Yes	Yes	No	No	Any valid CampaignID in the UA_Campaign table	No	No	Yes	No
CntrlCellID	bigint	NULL	If the target cell has an associated control cell, this field holds the ID of the control cell.	No	No	No	No	No	Yes	Any valid CellID in the UA_TargetCell table	Yes	Yes	No	No
FlowchartID	bigint	NULL	Unique identifier of the flowchart that created the treatment.	No	No	Yes	Yes	No	No	Any valid FlowchartID in UA_Flowchart table	No	No	Yes	No

### Child Relationship(s) of "UA\_Treatment" Table

#### Child Table

Name	Comment
UA_ResponseHistory	User-created table that stores the required response tracking fields (AudienceID, TreatmentInstID, response date, response type, and so forth) plus any user-defined additionally tracked fields. There is a separate response history table for each audience level. Rows in this table are written by the Response process.

### Parent Relationship(s) of "UA\_Treatment" Table

#### Parent Table

Name	Comment
UA_TargetCells	This table stores information on target cells created in all flowcharts. Target cells are defined as cells that are attached to an output process (Mail List, Call List, Recommend, eMessage, Snapshot, or Optimize). It stores meta data information (name, code), source info (campaign, flowchart and cell IDs), treatment data (list of assigned offers/offer lists and whether it is a control cell), and whether the cell was created top-down in the Target Cell Spreadsheet (TCS) or bottom-up from

Parent Relationship(s) of "UA_Treatment" Table	
Parent Table

	within a flowchart.
UA_Offer	<p>This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer.</p> <p>During offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.</p>
UA_CCRunLog	This table logs each time a flowchart is run in production (not populated by test runs), providing a flowchart run history. A unique RunID is generated on each new flowchart run (but not for run branch/process). It records the start/end datetime and who ran the flowchart. For Campaign Collaborate runs, it also records information about the remote user.
UA_OfferHistory	This table stores all offer versions that have been given out to customers. It determines if a particular combination of parameterized offer attributes (offer version identified by OfferHistoryID) for a given offer (offerID) has already been created (using the CRC value). The UA_OfferHistory table is populated only once for each unique offer version. If the UA_OfferHistory table is already populated for an offer, it will not be populated again if contact history is updated for the same offer.
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign.
