# Chapter 1. Unica Platform Release Notes

Contains information about new features, defect fixes, and known issues that HCL releases as part of a scheduled software release.

## New features and changes in version 12.0

This section describes the new features and changes introduced in the 12.0 version of Unica Platform.

Unica Platform now supports JBoss and Apache Tomcat®

Unica Platform now supports JBoss and Apache Tomcat application servers.

### Upgrade paths

1. Supported upgrade path via installers: 11.1 -> 12.0 only.
2. Customers at 11.0 -> Fast upgrade to 12.0.

### BIRT reports

Unica Suite now includes out of the box reports based on the open source technology BIRT. This consists of a reporting engine, shipped as a web application with the Platform installer, and reports sets that are shipped with individual products. For more details on how to install the BIRT reporting engine and install the reports, see the BIRT Reports Installation and Configuration Guide.

## Fixed defects

This section describes the fixed defects in the 12.0 version of Unica Platform.

Issue ID	Description
----------	-------------

HMA-294121, HMA-302362, HMA-302411	XSS (Cross-Site Scripting) vulnerability in Global Dashboard > Manage dashboard users
HMA-302370	Security Vulnerability : "Information Leakage" in cognos server when integrated with Unica Suite

## Known issues

This section describes the known issues in the 12.0 version of Unica Platform.

Issues	Description
HMA-244862	Client polling execution thread control is required.
HMA-276643	Internal users not able to login in case of LDAP server is unavailable in Unica Platform.
HMA-75443	JMAT: Uninstaller with no option runs in silent mode when product was installed in console mode on Windows.
HMA-186137	LDAP sync fails intermittently. The sync never works until the server is restarted.
HMA-267374	Platform: Cannot resize back to original size for portlet
HMA-222131	Issues in syncing OD user roles when Audit Event Logging is enabled
HMA-268210	Usability - Title missing for SAML NVP attribute for user
HMA-271642	A "Please wait ..." message is displayed multiple times in console mode installation while upgrading from version 10.1 or during a clean installation.
HMA-287668	In JBoss, the following warning is logged on JBoss console: Warning "Failed to define class

	<p>com.sun.jersey.api.json.JSONWithPadding in Module "deployment.Campaign.war:main"</p> <p>This can be ignored.</p>
HMA-295542	<p>When editing Roles and permissions, session gets aborted with error message "Your request processed successfully, but the server is unable to send the success message because you submitted the data more than once" if an user clicks on save button more than once.</p>
HMA-305244	<p>Jboss : Getting TimedOut error while deploying Platform war</p> <p>This is resolved by setting java option -</p> <p>Djboss.as.management.blocking.timeout=3600</p>
HMA-305850	<p>Automatic Datasource creation fails forUnicaPlatformDS -Linux/AIX</p> <p>The datasource must be created manually by using:</p> <p>Creating the deployment xml - unica.xmlmanually for tomcat deployment</p> <p>Creating "UnicaPlatformDS" - JNDI manually in the unica.xml.</p> <p>Using the Unica Platform utility to encrypt tomcat password.</p> <p>Updating the unica.xml file with the newlygenerated password.</p>
HMA-306157	<p>Platform Scheduled flowcharts are not getting executed after upgrade.</p> <p>Use the quartzjobtool to update scheduler jobs. This is a required step. If this upgrade tool is not run, any existing scheduled job will fail to start. The quartzjobtool is in the tools\bin directory under Unica Platform installation. Run this utility from the tools\bin directory.</p> <p>Example command (Windows): quartzjobtool.bat</p> <p>Example command (Unix): ./quartzjobtool.sh</p>

HMA-300725	<p>For MariaDB with WAS setup, the following error is a known issue. This can be ignored as in MariaDB JDBC client, the <code>MariaDbConnection</code> class do not support the implementation of <code>setTypeMap()</code> API of JDBC Connection interface.</p> <pre>J2CA0081E: Method cleanup failed while trying to execute method cleanup on ManagedConnection WSRdbManagedConnectionImpl@425c7a23 from resource UnicaPlatformDS. Caught exception: com.ibm.ws.exception.WsException: DSRA0080E: An exception was received by the Data Store Adapter. See original exception message: Not yet supported. with SQL State : null SQL Code : 0</pre>
------------	--

## Known limitations

This section describes the known limitations in the 12.0 version of Unica Platform.

Issues		Description
Limitations on automatic synchronization of external users		<p>When Unica is configured to integrate with a Windows Active Directory or LDAP server, users and groups are synchronized automatically at pre-defined intervals. This automatic synchronization has limited functionality.</p> <p>Automatic synchronization updates user attributes only. As group membership changes such as adding, removing, or changing members in a group require administrator oversight, import of these</p>

		<p>changes is confined to the manual synchronization process by default.</p> <p>You can force a full synchronization of all users and groups by using the <b>Synchronize</b> function in the Users area of Unica. No additional configuration is required.</p> <p>However, you can also use a hidden configuration property to include group membership changes in the automatic synchronization process. For details, contact Services.</p>
Administration users can edit their own permissions	DEF 184911	<p>Users with the Unica Platform <b>AdminRole</b>, such as the asm_admin user, can add the <b>PlatformAdminRole</b> to their own accounts, which would increase their access across partitions. It is an authorization issue to allow users with administration permissions to edit their own permissions.</p>
