New Platforms supported in Unica Platform version 12.1.0.3

1. Platform 12.1.0.3 supports HCL OneDB as system database. For more information about installing Unica 12.1.0.3 with system tables on HCL OneDB, see the Unica V12.1.0.3 Installation Guide for OneDB.
2. Platform 12.1.0.3 supports Websphere Application Server 8.5.5.18.

Audit logging with info from Siteminder

A new parameter "Additional header variable" is added under Platform configuration node HCL Unica | Unica Platform | Security | Login method details | Web Access Control.

This parameter can contain a comma separated list of http header variables that will be stored in audit tables each time a user logs in through web access control.

The value for these http header variables can be seen in the audit event report, by more in the event detail column.

License-Download YTD Usage report of entitlements

A usage report is now available on the License details page. It allows you to query the history of license consumption over time and export it as a PDF .

Fixed defects

This section describes the fixed defects in the 12.1.0.3 version of Unica Platform.

Issue ID	Description
HMA-313965	encryptTomcatDBPasswords utility was not working correctly with Help argument.

Known issues

This section describes the known issues in the 12.1 version of Unica Platform.

Issues	Description
HMA-320393	On Audit Events Report page, when users navigate to different pages, the "Fail to load data" error message displays on screen. Workaround: Click 'Report parameters', add one or more additional columns to 'Columns in report', and click 'Save and close' button.
