Chapter 1. Release Notes for version 12.1.1

Contains information about new features, defect fixes, and known issues in Unica Collaborate that HCL releases as part of a scheduled software release.

System Requirements and Compatibility

Unica Collaborate operates as part of the Unica suite of products. Unica Collaborate, version 12.1.1 requires Unica Platform, version 12.1.1 and Unica Campaign, 12.1.1.

Upgrade paths

The following are the supported upgrade paths.

12.1.0 -> 12.1.1

12.1.0.x -> 12.1.1

Customers prior to 12.0.x must perform fast upgrade to 12.1 and then upgrade to 12.1.1.

Unica Collaborate 12.1 supports the fast upgrade approach. This approach allows upgrades from version 8.6 onwards to version 12.1. This helps the customers bypassing the multi-step upgrade. The Fast Upgrade approach is also useful in reducing upgrade downtime. The approach is provided for Unica Platform, Campaign, Collaborate, Plan, Interact for upgrade from 8.6.x version onwards.

For details, see the Fast Upgrade documentation released with version 12.1. After version 12.1, we can perform in place upgrade till version 12.1.1.

Where to find complete system requirement and compatibility information

For a list of Unica Software product versions compatible with this product and a list of third party requirements for this product, see the Recommended Software Environments and Minimum System Requirements document.

Where to find report package reference documentation

Reference documentation for report packages is no longer available on the documentation server where the PDF versions of the product documentation are posted. You can access

the reference documentation for report packages after you install the reporting schemas on the machine where the Unica Platform is installed. The reference documentation is in a subdirectory of the Cognos10 directory under the report package installation.

Where to find documentation

You can find the documentation here.
