Table of Contents

Contact Optimization 9.0.x
Data Model

Rules Types:
1 - Customers In - Exclude/Include Only
2 - Interactions Where - Exclude/Include Only
3 - Min/Max Offers
4 - Max Package Interactions
5 - Min/Max Total Cost
6 - Min/Max Offer Interactions
7 - Min/Max Package Interactions
8 - Min # Unique Offers
9 - Max # Duplicates
10 - Never A with B
11 - Never A followed by B
12 - B only with A

Rules Subtypes:
1 - None
2 - Include
3 - Exclude

Rule Contraint Types
1 - MinCost (Float >=0)
2 - MaxCost (Float >=0)
3 - MinCount (Number >=0)
4 - MaxCount (Number >=0)
5 - Number of Days (Number >=0) - 0 means this optimization period.
6 - Filter Subquery (XML)
7 - Channel Filter Subquery (XML)
8 - Sensitivity Enable [1 - enable, 0 - disable]

Peripheral Data
1 - Offer ID (denormalize into PCT)
2 - Segment ID
3 - Offer Attributes (Instances)
4 - Cost Per Offer
5 - Score Per Offer
6 - Contact Date
7 - PackageID (denormalize into PCT)

UACO_OptSession
* Template table name is a table with Customer Defined Values.
* The Transaction Score Field is a field name from the PCT that represents the field to use when calculating score.
* ScoreAllOfferSeg - Field that contains a default score for the intersection of all offers/all segments.

UACO_SesnRunHist
RunID - This field starts at 1 for each session and increments from there.
FinalStatus - XML document of the last status during optimization.

UACO_SesnSegment
* ScoreAllOffers - Field that defines the default value of scores for the intersection of the particular segment with ANY offer.

UACO_OfferSeg
* Score - Field that defines the score for the intersection of the particular segment an the particular offer.

UACO_SesnOffer
* ScoreAllSegments - Field that defines the default value of scores for the intersection of the particular offer with ANY segment.

Session Run Type
1 - Production Run
2 - Test Run

Rule Subsections
1. Section A
2. Section B

1. Free
2. Locked

One per Session

- Each of the tables in this grey section are:
- One per session
- Dynamically created
- The 00000000000 in the table name are replaced with a 10 digit ACOSessionID

An Entry into this table defines that the ContactID has passed.

UACO_PCTBase, UACO_POABase, UACO_OCTBase
These tables are never changed. They are used as template tables to define the base set of fields necessary to be created in the UACO_PCT0000000000, UACO_POA0000000000, UACO_OCT0000000000 tables.

Table	
Name	**Comment**
UA_AttributeDef	The UA_AttributeDef table contains the definitions of both system and custom attributes for offers and cells (campaign custom attributes are still stored in the UA_CampAttribute table). System-defined attributes have the field SystemDefined=1. Currently Offers (OfferTemplates, Offers, OfferHistory) and Cells use these attribute definitions. This table is written to when the Save button is invoked from the Custom attribute definition page. Each attribute creates one row in this table, identified by the unique ID AttributeID. After an attribute is initially created, some fields like the AttributeType and Length fields cannot be modified (see individual fields for further info).
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign. The UA_CampaignExtAttr is populated at the same time with any campaign custom attribute values.
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).
UA_Offer	This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer. During offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.
UA_OfferList	This table stores both internal and user-created offer lists. User-created offer lists can be static (fixed list of offers) or smart (dynamic; based on a query). Internally generated offer lists are used to group together the actual list of offers assigned to a specific cell in a CSP when multiple offers are assigned. Internal offer lists may reference user-created offer lists (only one level of nesting supported).
UA_OptimizeProcess	An entry in this table represents a single optimize process box as seen in Campaign flowcharts.
UACO_OCT0000000000	This is an example table, built per ACO session, based on the UACO_OCTBase table.
UACO_OCTBase	This table contains all of the columns that are used to create an Optimized Contacts Table (OCT) for a session.
UACO_OfferSeg	This table contains the scores used at the intersection of an offer and segment in the score matrix.
UACO_OptSession	An entry in this table represents a single ACO session with all of its meta-data.
UACO_PCT0000000000	This is an example table, built per ACO session, based on the UACO_PCTBase table.
UACO_PCTBase	This is the base table that is used to generate the PCT. All columns in this table will automatically appear in the PCT.
UACO_POA0000000000	This is an example table, built per ACO session, based on the UACO_POABase table.
UACO_POABase	This table contains all of the columns that are used to create the Parameterized Offer Attributes (POA) table for a session.
UACO_RC0000000000	The UACO_RC00000010000X tables are created to allow randomization of the customers as they are processed and put into chunks. This was introduced in ACO 7.3. Each unique audience key appears in the table with a random #. The table is generated when the ACO session is first run. Thereafter, it is evaluated to see if any participating campaigns have subsequently run, in which case the RC table is re-generated (to pick up new CustIDs and drop old ones no longer included).
UACO_RConstraint	This table contains the set of generic rule constraints types with their values for each rule as associated to their specific subsections.
UACO_RCType	This table contains a lookup of valid values for the Rule Constraints. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_RException	Used to store list of exceptions rules added by user

Table	
Name	**Comment**
UACO_RExConstraint	Used to store list of exception constraints and its values
UACO_RExType	Used to store list of supported exception constraint types
UACO_ROffer	This table contains the set of offers that contraint the given rule for the given subsection.
UACO_ROfferList	This table contains the set of offer lists that contraint the given rule for the given subsection.
UACO_RSegment	This table contains the set of segments that contraint the given rule for the given subsection.
UACO_RSubsection	This table contains a lookup of valid subsection values. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_Rule	This table contains the basic description of the rule used in an ACO session.
UACO_RuleSubtype	This table contains a lookup of rule sub types that are used to describe the rule. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_RuleType	This table contains a lookup of rule types used to enforce data-integrity for the rule created within a session. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_SesnOffer	This table contributes to the definition of two items: the score matrix and the "displayed offers" used in the session.
UACO_SesnRunHist	This table contains the history of session runs that were executed. It references the report files that were generated by the specific runs.
UACO_SesnRunType	This table contains a lookup of valid run types. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_SesnSegment	This table contributes to the definition of two items: the score matrix and the "displayed segments" used in the session.
UACO_SesnStatus	This table contains a lookup of valid values for the status of an ACO session. The contents of this table are fixed with the expected values for any particular release of ACO.
UACO_UserTable	This is an example of a user table that can be specified by the user to define the appended columns to the PCT during session creation time.

Column(s) of "UA_AttributeDef" Table														
Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
AttributeID	bigint	NOT NULL	Globally unique identifier of the attribute. This ID is assigned by the system when an attribute is created. Custom attribute IDs start at either 100 or the value of internalIDLowerLimit config parameter, whichever is higher.	Yes	No	Yes	Yes	No	No		Yes	No	No	No
Name	varchar(64)	NOT NULL	Internal name of the attribute, must be globally unique. The name is user-provided for custom attributes and is the name used in any Affinium query expression when the field is used as an AGF. The internal name is automatically provided for system-defined attributes and cannot be modified. **Changing this value after it has been used will break any query expressions referencing the prior name."	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special Affinium query language name characters	Yes	Yes	No	No
DisplayName	varchar(64)	NULL	Name of attribute, should be unique with offer attributes or unique within cell attribute names. The name is user-provided	No	No	Yes	No	No	Yes	Any text characters, minus standard	Yes	Yes	No	No

Column(s) of "UA_AttributeDef" Table

Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Execute	Configuration
			for custom attributes and is the label displayed to the user in forms and reports (e.g., the Custom attributes definition page).							disallowed special name characters				
Description	varchar(512)	NULL	Optional, user-entered, free-form description of the attribute.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
ObjectType	int	NULL	System-generated value specifying the type of object for which this attribute is defined.	No	No	Yes	Yes	No	No	1=Session, 2=Campaign, 3=Segment, 4=Offer, 5=Product, 6=Cube, 7=ACOSession, 8=CustomMacro, 9=DerivedField, 10=Trigger, 11=TargetCell	Yes	No	No	No
EnumType	int	NULL	User specified behavior on whether an attribute is a free-form text box (user enters value), a drop-down list with fixed entries, or whether the user can choose from a drop-down list OR add an additional value. Additional values are checked for uniqueness (case-insensitive compare) and will be available in the drop-down list for all users. Type can be only be changed from 1 to 2 and vice versa after initial creation. *This option is currently available only for enumerated text strings (not for date, numeric, or currency data types).	No	No	Yes	No	No	Yes	0=Edit Only, 1=Enumeration Only, 2=Enum with Dynamic Add	Yes	Yes	No	No
AttributeType	int	NULL	User-specified data type for a custom attribute (not editable for a system-defined attribute). Types 5 and 6 can only be created from UMO or DM. **This value cannot be changed after initial creation of a custom attribute.	No	No	Yes	No	No	Yes	1=String, 2=Number, 3=DateTime, 4=Currency, 5=Boolean, 6=Integer	Yes	No	No	No
Length	int	NULL	User-specified value for length of text string data type and precision (# of decimal places to the right of the decimal point)	No	No	Yes	No	No	Yes	Positive integer; limit of maximum 16 digits	Yes	Yes	No	No

Column(s) of "UA_AttributeDef" Table														
Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
			displayed for numbers and currency data types. Not used for datetime data type. **After initial creation of a text-string custom attribute, this value can only be increased, not decreased. It can be changed at any time for a numeric or currency data type.							of precision available for numeric values				
Retired	int	NULL	Reserved for future use.	No	No	Yes	Yes	Yes	No	0 = active; 1 = retired	No	No	No	No
SystemDefined	int	NULL	Specifies whether an attribute is a predefined attribute shipped with AC. All custom attributes have a value of 0. System-defined attributes cannot be deleted from the system and cannot have the Internal name or data type edited (description and length can be edited).	No	No	Yes	Yes	No	No	0 = custom attribute, user-defined, 1 = system-defined	Yes	No	No	No
CreateDate	datetime	NULL	Server date and time the object was created.	No	No	Yes	Yes	No	No	Valid datetime	Yes	No	No	Yes
CreateBy	int	NULL	UMP user ID for the user who created the object.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	No	No	No
UpdateDate	datetime	NULL	Last server date and time the object was updated (edited and saved).	No	No	Yes	Yes	No	No	Valid datetime	Yes	Yes	No	Yes
UpdateBy	int	NULL	UMP user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	Yes	No	No
CreatorFlag	int	NULL	Specifies the application that created the custom attribute	No	No	No	Yes	No	No	NULL/0 = Campaign 1 = Unica Marketing Operations (UMO) 2 = Unica Distributed Marketing	Yes	No	No	No

Child Relationship(s) of "UA_AttributeDef" Table	
Child Table	
Name	**Comment**
UA_OfferTemplAttr	This table stores the offer attribute values associated with a particular offer template and specifies whether each attribute is hidden, parameterized, its default value, and display order. Note that only one of the fields StringValue, NumberValue and DatetimeValue contain the value for the attribute based on the attributeType defined in the UA_AttributeDef table.
UA_CellAttribute	This table stores the custom cell attribute values for a particular cell. These values are data-entered by the user in the Target Cell Spreadsheet (TCS). Only one of the fields (StringValue, NumberValue, DatetimeValue) is populated for any given row, depending on the data type of the custom attribute (as specified in UA_AttributeDef). Attributes are displayed in the Target Cell spreadsheet in alphabetical order.
UA_OfferHistAttrib	This table stores the actual values used for parameterized (only) offer attributes when an offer is used (given out in a flowchart production run with logging to CH enabled). It is populated at flowchart run time.
UA_EnumAttrValues	This table holds all the drop-down list (enumerated) data values for custom attributes where UA_AttributeDef.EnumType = 1 or 2.
UA_OfferAttribute	This table stores the values of the static attributes and default values of the parameterized attributes associated with an offer (system-generated and custom).
UACO_POA0000000000	This is an example table, built per ACO session, based on the UACO_POABase table.
UA_CampToCellAttr	This table is a mapping of cell custom attributes to Campaign. The AttributeIDs in that table are all of cell attributes. This table is populated only in campaigns created in Unica Marketing Operations.
UA_CampAttribute	This table stores the values of the campaign custom attributes for each campaign.

Parent Relationship(s) of "UA_AttributeDef" Table

Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
CampaignID	bigint	NOT NULL	Globally unique, system-generated identifier of a campaign, assigned by the system when a campaign is created. AC uses the next available value (assumed unique) from the UA_IDSByType table for campaigns.	Yes	No	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values (may be outside this range for campaigns imported from another system	Yes	No	No	No

Column(s) of "UA_Campaign" Table

Column(s) of "UA_Campaign" Table															
Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
										using sesutil)				
Name	varchar(64)	NOT NULL	Name of campaign; not required to be unique (but is a best practice to be unique).	No	No	Yes	Yes	Yes	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No
Description	varchar(1024)	NULL	Optional, user-entered, free-form description of the campaign.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
FolderID	bigint	NULL	Folder ID for the folder where the campaign is stored. Value is automatically populated based on the folder where the object is stored. User can change this value by "moving" the object to a different folder.	No	Yes	Yes	Yes	No	No	Any valid FolderID value existing in UA_Folder table	Yes	Yes	No	No
CampaignCode	varchar(32)	NOT NULL	Globally unique code for the campaign. By default a campaign code is generated by the system using the configured campaign code generator (campCodeGenProgFile) when creating a new campaign. The length and format of the campaign code is specified at implementation time (campCodeFormat). (Both of these configuration parameters can be found in the server > systemCodes config section). The campaign code can be changed by the user to any unique value satisfying the code format (enforced by Campaign). **Changing this value after a campaign is run may cause response tracking problems if campaign code is used.	No	No	Yes	Yes	Yes	Yes	Depends on campaign code format specified: n = 0-9 a = A-Z c = A-Z, 0-9 x = any character	Yes	Yes	No	No
Initiative	varchar(255)	NULL	Optional initiative associated with this campaign.	No	No	No	No	No	Yes	Any value from the UA_Initiatives table **If values are subsequently deleted from UA_Initiatives, it is possible to have values here that	Yes	Yes	No	No

Column(s) of "UA_Campaign" Table														
Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
										do not appear in that table.				
Objectives	varchar(1024)	NULL	Optional, free-form text description of the campaign objective(s).	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
CreateDate	datetime	NULL	Date and time the Campaign is created.	No	No	Yes	Yes	No	No	Valid datetime	Yes	No	No	Yes
CreateBy	int	NULL	UMP userId of the user who created the Campaign.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	No	No	No
UpdateDate	datetime	NULL	Last server date and time the object was updated (edited and saved).	No	No	Yes	Yes	No	No	Valid datetime	Yes	Yes	No	Yes
UpdateBy	int	NULL	UMP user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid UMP UserID	Yes	Yes	No	No
StartDate	datetime	NULL	Date the campaign is effective. In the UI, this is the campaign Effective Date. Default value is today.	No	No	Yes	Yes	Yes	Yes	Valid datetime	Yes	Yes	No	Yes
EndDate	datetime	NULL	Date the campaign expires. In the UI, this is the campaign Expiration Date. Default value is one month from start date.	No	No	Yes	Yes	Yes	Yes	Valid datetime	Yes	Yes	No	Yes
LastRunDate	datetime	NULL	Date and time the campaign was last run (any flowchart, branch, process run of any flowchart within the campaign). This value is NULL if never run. Test runs do NOT update this value.	No	No	No	Yes	No	No	Valid datetime	No	No	Yes	Yes
RunBy	int	NULL	UMP user ID for the user who last ran the campaign; updated whenever LastRunDate is updated. This value is NULL if never run. Test runs do NOT update this value.	No	No	No	Yes	No	No	Valid UserID in UMP **Value may be invalid if UMP user is subsequently deleted.	No	No	Yes	No
ProjectID	int	NULL	Affinium Plan project ID. This field is populated when a campaign is created from Plan. By default, this value is NULL. When a project in plan is disassociated with this campaign, the system writes a NULL to this field (based on	No	No	No	Yes	No	No	NULL, 0, or valid ProjectID from Affinium Plan	Yes	Yes	No	No

Column(s) of "UA_Campaign" Table

Child Relationship(s) of "UA_Campaign" Table

Child Table

Name	Comment
UA_Flowchart	This table stores information for all flowcharts. It has one row for each flowchart in the system and is also used for reporting on the running flowcharts (status) in the system.
UA_CampToSegment	This table stores top-down defined relationships between a campaign and its related segments (specified by the user from the Campaign summary page by clicking on "Add/Remove Segments" link). This can be a many-to-many mapping.

Child Relationship(s) of "UA_Campaign" Table	
Child Table	
Name	**Comment**
	**Bottom-up segments (strategic segments used in a flowchart of the campaign) are not stored in this table.
UA_CampToOffer	This table stores top-down defined relationships between a campaign and its related offers (specified by the user from the Campaign summary page by clicking on "Add/Remove Offers" link). This can be a many-to-many mapping. **Bottom-up offers (offers used in a flowchart of the campaign) are not stored in this table.
UA_TargetCells	This table stores information on target cells created in all flowcharts. Target cells are defined as cells that are attached to an output process (Mail List, Call List, Recommend, eMessage, Snapshot, or Optimize). It stores meta data information (name, code), source info (campaign, flowchart and cell IDs), treatment data (list of assigned offers/offer lists and whether it is a control cell), and whether the cell was created top-down in the Target Cell Spreadsheet (TCS) or bottom-up from within a flowchart.
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_OptimizeProcess	An entry in this table represents a single optimize process box as seen in Campaign flowcharts.
UA_CampToCellAttr	This table is a mapping of cell custom attributes to Campaign. The AttributeIDs in that table are all of cell attributes. This table is populated only in campaigns created in Unica Marketing Operations.
UA_CampAttribute	This table stores the values of the campaign custom attributes for each campaign.

Parent Relationship(s) of "UA_Campaign" Table	
Parent Table	
Name	**Comment**
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).

Column(s) of "UA_Folder" Table

Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Execute	Configuration
FolderID	bigint	NOT NULL	Unique identifier of the folder. This ID is assigned by the system when a new folder is created. Folder IDs start at either 100 or the value of internalIDLowerLimit config parameter, whichever is higher.	Yes	No	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values (may be outside this range for campaigns imported from another system using sesutil)	Yes	No	No	No
Name	varchar(255)	NULL	Name of the folder; must be unique within the parent folder.	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No
Description	varchar(1024)	NULL	Optional description of the folder.	No	No	No	No	No	Yes	Any text characters minus standard disallowed special characters in text	Yes	Yes	No	No
ParentFolderID	bigint	NULL	FolderID of the parent folder. This field is used to trace backwards to get the absolute path name of the current folder. Only the top-level folder should have a NULL in this field. User chooses the parent folder when creating a folder.	No	No	Yes	Yes	No	Yes	Any valid FolderID from UA_Folder table	Yes	Yes	No	No
ObjectType	int	NULL	Type of system object stored in this folder.	No	No	Yes	Yes	No	No	1=Session, 2=Campaign, 3=Segment, 4=Offer, 5=Product, 6=Cube, 7=ACOSession, 8=CustomMacro, 9=DerivedField, 10=Trigger, 11=TargetCell	Yes	No	No	No

ACLID	int	NULL	For future use.	No	No	No	No	No	No		No	No	No	No

Child Relationship(s) of "UA_Folder" Table

Child Table

Name	Comment
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign. The UA_CampaignExtAttr is populated at the same time with any campaign custom attribute values.
UA_Segment	This table stores information on the strategic segments created by the Create Seg process. It is populated when a CreateSeg process is created and saved in a flowchart and subsequently updated when the CreateSeg process is run. A temporary copy of the row is created (with TempFlag=1) when the flowchart containing the CreateSeg process box is being edited or run.
UA_Offer	This table stores basic information about offers. All offer attributes are now stored in UA_OfferAttribute table. Each offer is associated with the Offer Template that was used to create the offer.\n\nDuring offer creation, the creator can change the values for the static attributes and default values for the parameterized attributes. Actual values of the parameterized attributes are assigned at the flowchart design time or at the flowchart run time.

Child Relationship(s) of "UA_Folder" Table	
Child Table	
Name	**Comment**
UA_OfferList	This table stores both internal and user-created offer lists. User-created offer lists can be static (fixed list of offers) or smart (dynamic; based on a query). Internally generated offer lists are used to group together the actual list of offers assigned to a specific cell in a CSP when multiple offers are assigned. Internal offer lists may reference user-created offer lists (only one level of nesting supported).
UA_Session	Stores information on sessions created in Campaign.
UA_Triggerlist	This table stores a name, a definition, and a note for each outbound trigger sent through the Schedule and Contact processes. A trigger executes a command line, which can be a batch file or a script file.
UA_DerivedField	This table stores derived fields for reuse across users and flowcharts. It stores the name, definition, and description. New derived fields created within the campaign are stored in this table by using the Create Derived Field window. Long predicate expressions may span multiple rows using the Description field as a numeric index to stitch together the multiple rows.
UA_CustomMacros	This table stores custom macros for reuse across users and flowcharts. It stores the query name, query (which can be raw SQL or the Affinium macro language) and description. The custom macro can take input parameters and return a data value with each audience ID.
UA_TableCatalog	This table stores information on all table catalogs available in Affinium Campaign.
UA_FlowchartTmpl	This table stores meta data for flowchart templates. It is populated when a user chooses Tools->Stored Templates from the flowchart menu.
UACO_OptSession	An entry in this table represents a single ACO session with all of its meta-data.

creatorFlag	int	NULL	Number indicating which Application created the Offer	No	No	No	No	No	No	Positive Integer	No	Yes	No	No
creatorObjectId	bigint	NULL	ID of the corresponding Object in the creator Application	No	No	No	No	No	No	Positive Long	No	Yes	No	No

Child Relationship(s) of "UA_Offer" Table	
Child Table	
Name	**Comment**
UA_OfferAttribute	This table stores the values of the static attributes and default values of the parameterized attributes associated with an offer (system-generated and custom).
UA_CampToOffer	This table stores top-down defined relationships between a campaign and its related offers (specified by the user from the Campaign summary page by clicking on "Add/Remove Offers" link). This can be a many-to-many mapping. **Bottom-up offers (offers used in a flowchart of the campaign) are not stored in this table.
UA_OfferListMember	This table stores the members of an offer list. For a user-defined static offer list, this contains the list of OfferIDs and their display order and is populated when the offer list is saved. For a user-defined smart offer list, this table contains the list of folders to which the smart query has been scoped (if any). For an internal offer list, this tables stores any referenced (nested) offer lists. The members can be any of these: o an individual offer o an offerList o a folder Each offer list member must be exactly one of the above.
UA_ProductIndex	This table stores the many-to-many relationship between products and offers based on the ProductIDs that match the "product query" associated with an offer (from the Related Offers field). It is used to quickly resolve the set of products associated with a particular offer for response tracking without having to re-run the UA_OfferToProduct.Condition query. This table is periodically populated/updated by a java program, interval configured in Unica Manager Platform (list parameters).
UA_Treatment	Stores all treatments (intersection of offer versions to target cells at a point in time (run instance) and related data. If multiple offers are assigned to a cell, there will be multiple rows in the treatment table (one treatment for each offer version given to the cell). If offer personalization is used, there a treatment will be created for each unique permutation of offer attributes (offer version) used (and HasDetailHistory=1 and contact information is stored in a separate table, UA_DtlContactHistory). This data is populated during a production run of a CSP only when logging is enabled.
UA_OfferToProduct	This table stores the information about the relationship between offers and products, specified by the "Relevant offers" field (required for an offer). It is only populated if the user specifies a value for the Relevant Offers field of an offer.
UA_OfferHistory	This table stores all offer versions that have been given out to customers. It determines if a particular combination of parameterized offer attributes (offer version identified by OfferHistoryID) for a given offer (offerID) has already been created (using the CRC value). The UA_OfferHistory table is populated only once for each unique offer version. If the UA_OfferHistory table is already populated for an offer, it will not be populated again if contact history is updated for the same offer.
UACO_ROffer	This table contains the set of offers that contraint the given rule for the given subsection.
UACO_PCT0000000000	This is an example table, built per ACO session, based on the UACO_PCTBase table.
UACO_SesnOffer	This table contributes to the definition of two items: the score matrix and the "displayed offers" used in the session.

Parent Relationship(s) of "UA_Offer" Table	
Parent Table	
Name	**Comment**
UA_OfferTemplate	This table contains one row for each offer template defined in the system (these are used to create offers). For each offer template, it defines the number of offer codes, their formats, and the offer code generator; the treatment code format and generator; and general offer template meta data.
UA_Folder	This table contains the basic data for all internal folders for object storage in the system. A new row is created each time a new folder is created for storing any of system object (e.g., campaign, session, offer, segment, custom macro, derived field, etc.).

OptimizeID	bigint	NOT NULL	This is an internal identifier for the Optimize Process Box that uniquely identifies it within a campaign.	Yes	No	Yes	Yes	Yes	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values.	Yes	No	No	No
TempFlag	int	NOT NULL	The temporary state of this box.	Yes	No	Yes	Yes	No	No	0 = not temporary 1 = temporary	Yes	Yes	No	No
FlowchartID	int	NOT NULL	Unique identifier of the flowchart containing the Optimize process box. This ID is assigned by the system when a flowchart is created.	Yes	No	Yes	Yes	Yes	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values.	Yes	No	No	No
CampaignID	bigint	NOT NULL	Unique identifier of the campaign containing the flowchart containing the Optimize process box. This ID is assigned by Affinium Campaign when a campaign is created. It uses the next available value (assumed unique) from the UA_IDSByType table for campaigns.	No	Yes	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values.	Yes	No	No	No
ACOSessionID	bigint	NOT NULL	Unique identifier for each ACO session.	No	Yes	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values.	Yes	No	No	No
ProcessName	varchar(255)	NOT NULL	The name given by the user for this process box (in the General tab of the process box, inside the flowchart)..	No	No	Yes	Yes	Yes	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No
Status	varchar(16)	NULL	The status of this Optimize process box.	No	No	Yes	Yes	No	No	'Free' or 'Busy'	Yes	Yes	Yes	No
RunBy	int	NULL	The ID of the user that last ran this process box.	No	No	Yes	Yes	No	No	Valid ASM User ID	Yes	Yes	Yes	No
LastRunDate	datetime	NULL	Date and time the Optimize process box was last run (any flowchart, branch, process run). This value is NULL if never run. Test runs do NOT update this value.	No	No	Yes	Yes	No	No	Valid datetime.	Yes	Yes	Yes	Yes
RunResult	varchar(2048)	NULL	The results of the last run. This is an XML field that contains metadata about the results of the run.	No	No	Yes	Yes	No	No	Well-formatted XML string containing Optimize process run results.	No	No	Yes	No
CreateDate	datetime	NULL	The date this process box was created.	No	No	Yes	Yes	No	No	Valid datetime.	Yes	No	No	Yes
CreateBy	int	NULL	The ID of the user that created this box.	No	No	Yes	Yes	No	No	Valid ASM User ID	Yes	No	No	No
UpdateDate	datetime	NULL	The last date/time this process box was changed.	No	No	Yes	Yes	No	No	Valid datetime.	No	Yes	No	Yes

Parent Relationship(s) of "UA_OptimizeProcess" Table

Parent Table

Name	Comment
UACO_OptSession	An entry in this table represents a single ACO session with all of its meta-data.
UA_Campaign	This table contains campaign meta data provided by the user and basic run information. One row is written this table each time a new campaign is created and saved. Related tables (UA_CampToSegment, UA_CampToOffer, and UA_Flowchart) are not updated until those relationships/links or objects are created. That is, a UA_Flowchart record will only be created when a new flowchart is added to the campaign. The UA_CampaignExtAttr is populated at the same time with any campaign custom attribute values.

Parent Table

Name	Comment
UACO_SesnSegment	This table contributes to the definition of two items: the score matrix and the "displayed segments" used in the session.
UACO_SesnOffer	This table contributes to the definition of two items: the score matrix and the "displayed offers" used in the session.

Column(s) of "UACO_OptSession" Table															
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Execute	Configuration
ACOSessionID	bigint	NOT NULL	A unique identifier for each ACO session	Yes	No	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values.	Yes	No	No	No
FolderID	bigint	NOT NULL	Unique identifier of the folder. This ID is assigned by the system when a new folder is created. Folder IDs start at either 100 or the value of internalIDLowerLimit config parameter, whichever is higher.	No	Yes	Yes	Yes	No	No	Globally unique positive integer within the internalIDLowerLimit and internalIDUpperLimit configuration parameter values for generated values	Yes	Yes	No	No
Name	VARCHAR(64)	NOT NULL	Name of the ACO session.	No	No	Yes	No	No	Yes	Any text characters, minus standard disallowed special name characters	Yes	Yes	No	No
Objective	VARCHAR(512)	NULL	Optional, user-entered, free-form objective of the session.	No	No	No	No	No	Yes	Any text characters	Yes	Yes	No	No
Description	VARCHAR(512)	NULL	Optional, user-entered, free-form description of the session.	No	No	No	No	No	Yes	Any text characters	Yes	Yes	No	No
AudienceName	VARCHAR(64)	NOT NULL	The audience level of the session. Once the session has been created the value of this should not be changed. It is with this audience level that the OCT/PCT/POA are generated. Valid values for this are stored in the configuration system.	No	No	Yes	No	No	Yes	Any audience level.	Yes	No	No	No
TemplateTableName	VARCHAR(64)	NULL	This is the name of a table used as a template for any user-defined fields. Each of the fields in this table is added to the PCT during generation so the user can customize the PCT to include fields to be used in rules. Once the session has been created,	No	No	No	No	No	Yes	Any table listed in the configuration for template table names.	Yes	No	No	Valid values from configuration.

Column(s) of "UACO_OptSession" Table																
Name	**Datatype**	**Null Option**	**Comment**	**Is PK**	**Is FK**	**Required Field**	**System Generated**	**Sys-Gen Override**	**User-Entered**	**Valid Values**	**Stored-Create**	**Stored-Save**	**Stored-Execute**	**Configuration**
			the value of this column should not change. 1) This table must be part of the system tables. 2) This value can be NULL, which means that no user-defined columns will be used in the session.											
PCTName	varchar(64)	NOT NULL	This is the name of the PCT table associated with this session. This table should live in the same schema as the system tables. This table contains all of the proposed contacts from participating campaigns.	No	No	Yes	Yes	No	No	The format of this table name is defined in the software using the format: UACO_PCTXXXXXXXXXX Where 'XXXXXXXXXX' is the 10 digit 0 padded ACOSessionID.	Yes	No	No	Yes
OCTName	varchar(64)	NOT NULL	This is the name of the OCT table for this session. The OCT contains all of the transactions that ACO has accepted out of the PCT. This field cannot be NULL.	No	No	Yes	Yes	No	No	The format of this table name is defined in the software using the format: UACO_OCTXXXXXXXXXX Where 'XXXXXXXXXX' is the 10 digit 0 padded ACOSessionID.	Yes	No	No	Yes
POAName	varchar(64)	NOT NULL	This is the proposed offer attribute table for this session. It contains the value of the attributes for the offers being proposed in the PCT.	No	No	Yes	Yes	No	No	The format of this table name is defined in the software using the format: UACO_POAXXXXXXXXXX Where 'XXXXXXXXXX' is the 10 digit 0 padded ACOSessionID.	Yes	No	No	Yes
TrxnScoreField	VARCHAR(64)	NOT NULL	Stores the name of the score field in the PCT associated to this session (see PCTName) that will be used as the score field for the transactions in the PCT.	No	No	Yes	Yes	Yes	Yes	Any numeric column from the User Template Table or ScorePerOffer Column or a special internal value to indicate score matrix.	Yes	Yes	No	No

Column(s) of "UACO_OptSession" Table															
Name	Datatype	Null Option	Comment	Is PK	Is FK	Required Field	System Generated	Sys-Gen Override	User-Entered	Valid Values	Stored-Create	Stored-Save	Stored-Execute	Configuration
			By default the value of this column will be the "ScorePerOffer" column from the PCT.											
ScoreAllOfferSeg	float	NOT NULL	This is the score from the score matrix used by default for any offer/segment combination that does not have a value assigned for it.	No	No	No	No	No	Yes	Any positive numeric score.	Yes	Yes	No	No
SessionStatusID	bigint	NOT NULL	The status of the session. See the UACO_SesnStatus table for valid value for this column.	No	Yes	Yes	Yes	No	No	See the UACO_SesnStatus table for valid values for this column.	Yes	Yes	Yes	Assigned during DDL execution.
CreateDate	datetime	NOT NULL	The date and time this session was created.	No	No	Yes	Yes	No	No	Valid datetime.	Yes	No	No	Yes
CreateBy	int	NOT NULL	ASM userId of the user who created the session.	No	No	Yes	Yes	No	No	Valid ASM User ID	Yes	No	No	No
UpdateDate	datetime	NOT NULL	The last server date and time the object was updated (edited and saved)..	No	No	Yes	Yes	No	No	Valid datetime.	Yes	Yes	No	Yes
UpdateBy	int	NOT NULL	ASM user ID for the user who last updated the object; same as CreateBy for initial object creation.	No	No	Yes	Yes	No	No	Valid ASM UserID	Yes	Yes	No	No
PolicyID	int	NOT NULL	Identifier of the security policy that this current session belongs to.	No	No	Yes	Yes	Yes	No	Any valid PolicyID from Affinium Manager's usm_policy table	Yes	Yes	No	No
ACLID	int	NOT NULL	For future use.	No	No	No	No	No	No		No	No	No	No
CustomSettingsFlag	int	NULL		No	No	Yes	No	No	Yes		Yes	Yes	No	No
CustomSettingsXML	varchar(3000)	NULL		No	No	Yes	No	No	Yes		Yes	Yes	No	No

Name	Comment
UA_AttributeDef	The UA_AttributeDef table contains the definitions of both system and custom attributes for offers and cells (campaign custom attributes are still stored in the UA_CampAttribute table). System-defined attributes have the field SystemDefined=1. Currently Offers (OfferTemplates, Offers, OfferHistory) and Cells use these attribute definitions. This table is written to when the Save button is invoked from the Custom attribute definition page. Each attribute creates one row in this table, identified by the unique ID AttributeID. After an attribute is initially created, some fields like the AttributeType and Length fields cannot be modified (see individual fields for further info).

Column(s) of "UACO_POABase" Table

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation
170 Tracer Lane
Waltham, MA 02451
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

All IBM prices shown are IBM's suggested retail prices, are current and are subject to change without notice. Dealer prices may vary.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

If you are viewing this information softcopy, the photographs and color illustrations may not appear.
